

Room 8

Room 8 has seven students and 3-support staff members. We enjoy working as a team. The students are learning through sensory exploration.

Our topic for the Term2 is “exploring the world of water”. We decided to visit Kelly Tarlton’s to go and explore what is happening deep under the water. The students had fun and were surprised at what they could see under the amazing water viewing tunnels.

Cooking: The students had the opportunity to use their senses to investigate raw fish (Snapper). We prepared the fish and cooked it. They have experienced the Kiwi tradition of eating fish and chips.

Art: The students have created different types of fish with support

Science: We experimented with sugar and fruit juice and made jelly beads to represent the fish eggs. Yummy!
